Everesto Cabasag

Full Stack Developer | AI Integration & Business Automation

devnetechn@gmail.com github.com/devnetechn barsportfolio.vercel.app Philippines, remote

Summary

Full stack developer building business web applications: booking and lead pipelines, e-commerce with supplier and payment integrations, and multi-tenant platforms. Adds AI where it makes bounded, auditable decisions, such as a Claude-powered CRM agent and an OpenAI assistant that answers from live data. Works in Next.js, React, TypeScript, Node.js, and PHP, with PostgreSQL and MySQL.

Selected projects

Randy's Painting & Drywall

Freelance client project — www.randyspaintdrywall.com

- Rewrote the original React + Node app as plain PHP 8, MySQL and vanilla JavaScript so it runs on stock Apache shared hosting with no build step.
- Built customer accounts, estimate booking with status tracking, and an admin workflow to confirm, decline, reschedule, and complete appointments.

PHP 8, MySQL / MariaDB (PDO), Vanilla JavaScript, CSS, Apache, Anthropic Claude API, Google Gemini API, Twilio, Google Calendar API, Gmail SMTP

Web2Print

Freelance client project — web2print-clone.vercel.app

- Built the 4over integration: API client, catalog and price sync into the database, product option parsing, category mapping, shipping quotes, order submission, and status sync.
- Implemented per-category markup that turns wholesale prices into retail prices, adjustable from the admin dashboard.

Next.js (App Router), React, TypeScript, Tailwind CSS, Supabase (Postgres + Auth), 4over API, Stripe, GoHighLevel

IHES Alumni Association

Alumni association platform — alumni-six-wine.vercel.app

- Built the Express REST API (auth, alumni directory, batches, events, registrations, jobs, groups, messages, notifications, shop, sponsors, officers, projects, and admin routes) and the React frontend with 50+ pages.
- Designed the PostgreSQL schema and multi-tenancy: tenants resolved per request from the subdomain, with Row Level Security policies and a restricted database role so isolation is enforced by the database, not just the app.

React 19, Vite, Tailwind CSS, Node.js, Express, OpenAI API, PayMongo

PetCoverage Pulse

Technical assessment for PetCoverage — pulse-technical-assessment-livid.vercel.app

- Phase 1: fixed a heartbeat bug that kept every session alive, a chat data-channel type mismatch, and ICE candidates arriving before the remote description. Added atomic connection claiming, timeouts, and leave cleanup.
- Corrected the privacy offset with a great-circle calculation so dots stay 1–3 km from the user at high latitudes and across the date line.

Next.js, React, TypeScript, Prisma, PostgreSQL, Mapbox GL JS, Supabase

Skills

Frontend	TypeScript, JavaScript, React, Next.js (App Router), Tailwind CSS, HTML & CSS
Backend	PHP 8, Node.js & Express, REST API design, Next.js route handlers & server actions, Socket.io, WebRTC signaling, JWT & session auth, Jest & Supertest
Data	PostgreSQL, Row Level Security, MySQL / MariaDB, Supabase, Prisma
APIs & AI	Anthropic Claude API, OpenAI API (function calling), Google Gemini API, Stripe, PayMongo, Twilio, Google Calendar API, 4over print API, GoHighLevel webhooks, Mapbox GL JS
Delivery	Git & GitHub, Vercel, Hostinger & cron jobs
Familiar	Laravel, Vue, Vite, Python, Django, SQLite, SCSS
